# Replicating cloud data
Real-time data access for on-prem apps

## Challenge

Fortune 500 financial services group USAA wanted to move its on-premise compliance application platform to the cloud. Some compliance applications would need to remain on-premise but the cloud platform didn't have the APIs to provide real-time data access.

## Solution

USAA undertook a comprehensive review of possible solutions. Qlik Replicate was found to be ideal because it offers near real-time replication, supports a wide range of data formats, provides flexibility, and delivers out-of-the-box monitoring and alerting.

## Results

Qlik Replicate is an integral part of USAA's compliance platform and is credited with enabling the company to successfully implement its first cloud-based data replication solution. USAA's full load volume is 12 million records within two hours.

### Solution Overview

**Customer Name**
USAA (United Services Automobile Association)

**Industry**
Financial services

**Geography**
San Antonio, Texas

**Function**
IT

**Business Value Driver**
Reimagined Processes

"Thanks to Qlik, USAA successfully implemented its first cloud-based data replication solution. It works as if the compliance database had never moved."

Yuesheng Liu, Lead Software Engineer, USAA
